

2025-05-08 Press Release

## **Caeli Platform for Renewables Launches in the UK – Opening New Opportunities for Landowners**

*Digital platform simplifies the path to wind energy, offering expert advice, transparency, and access to trusted project partners*

**London/Berlin, 8 May 2025** – Caeli Platform for Renewables, the digital platform for wind energy development and land allocation, has officially launched in the United Kingdom. Building on its proven success in Germany, Caeli offers landowners a transparent, straightforward way to explore wind energy opportunities on their land – with expert support, independent guidance, and no obligation.

### **Turning Land into Long-Term Value**

Leasing land for wind energy can offer landowners a reliable income for decades. Yet the process is often complex, opaque, and difficult to navigate alone. Caeli makes it easier by providing:

- Free, professional site assessments with no commitment
- Clear analysis of wind potential, planning conditions, and environmental factors
- Guidance on contracts, revenue models, and regulatory requirements
- Structured access to vetted project developers
- Competitive offers through a transparent, impartial process
- Support for landowner pooling and coordinated project planning

“Landowners want clarity, fair terms, and control over their land,” says Hans-Georg von Lewinski, Head of International Development at Caeli. “We offer exactly that – a digital platform backed by real people who understand the market and protect the interests of landowners.”

Caeli’s digital platform is now available to landowners in the UK, offering impartial advice, structured developer access and transparent contract support – all in one place at [caeli.co.uk](https://caeli.co.uk).

### **Policy Momentum, Local Potential**

The UK government has increased its support for onshore wind, particularly in England. But a lack of high-quality, pre-assessed sites continues to slow development. Caeli bridges this gap – bringing landowners and developers together in a structured, professional way.

**Caeli Platform for Renewables**

**128 City Road, London EC1V 2NX, United Kingdom**

**Managing Directors: Andreas Rieckhoff, Ben Schlemmermeier, Heiko Bartels**

**[www.caeli.co.uk](https://www.caeli.co.uk)**

“Contributing to the energy transition shouldn’t be complicated,” says Heiko Bartels, Managing Director at Caeli. “With Caeli, landowners can explore wind opportunities without risk, pressure, or confusion – and with the confidence of working with trusted experts.”

### **Proven Success in Action**

Caeli is already established in Germany, where the platform published sites with over 1,500 MW of wind capacity in 2024 and facilitated more than 30 successful projects. With its UK launch, Caeli brings this tested approach to one of Europe’s most promising growth markets – enabling landowners to benefit from clean energy while supporting national climate goals.

### **About Caeli Platform for Renewables**

*Caeli Platform for Renewables* is a digital platform accelerating the development of wind energy projects. Combining AI-powered site analysis with a structured marketplace, Caeli helps landowners, developers, and investors collaborate efficiently – from initial assessment to project completion. Founded in Germany and trusted by leading energy providers, Caeli is now expanding across Europe to support the digital transformation of renewable energy development.
